

Claims

1. A tractor which is characterized in that a PTO casing which incorporates a PTO transmission mechanism therein is detachably mounted on a rear portion of a transmission casing and, at the same time, the PTO casing is mounted in a state that a front portion thereof is housed in the inside of the transmission casing.

2. A tractor according to claim 1, wherein a proximal end portion of the lift cylinder is pivotally mounted on an upper portion of the transmission casing, a lift cylinder mounting portion is formed on a lower portion of a side wall of the PTO casing, and a lift cylinder which performs an extension-and-contraction movement in the vertical direction is interposed between the lift cylinder mounting portion and a middle portion of the lift arm.
